Yolov6/yolov6/core/evaler.py line-no: 258-266

```python
254             anno_json = os.path.join(dataset_root, 'annotations', f'instances_{base_name}.json')
255         pred_json = os.path.join(self.save_dir, "predictions.json")
256         LOGGER.info(f'Saving {pred_json}...')
257         with open(pred_json, 'w') as f:
258             json.dump(pred_results, f)
259
260         text = (''.join([i for i in open(anno_json, 'r')])).replace(".png", "")
261         os.remove(anno_json)
262         JSON_file = open(anno_json, 'w')
263         JSON_file.write(text)
264         JSON_file.close()
265
266         anno = COCO(anno_json)
267         pred = anno.loadRes(pred_json)
268         cocoEval = COCOeval(anno, pred, 'bbox')
269         if self.is_coco:
270             imgIds = [int(os.path.basename(x).split(".")[0])
```

Code is available here:

text = (''.join([i for i in open(anno_json, 'r')])).replace(".png", "")

os.remove(anno_json)

JSON_file = open(anno_json, 'w')

JSON_file.write(text)

JSON_file.close()
